

Title

GIS Technical Manager, St. Louis

General

The Opportunity:

Use your GIS software experience to serve as a technical lead for implementing the next generation of custom-built systems using cutting-edge ESRI technologies.

Department

Database Services

The Team:

A career on the ESRI Professional Services and Consulting team provides you the opportunity to collaborate with our customers to support innovative database and applications development, SOA, and enterprise software solutions. The variety of project work enables you to use your software development, database engineering, GIS expertise, and project management skills in a number of growing markets such as natural resources, commercial, government, utilities, and defense. Most positions are based at our headquarters in Redlands, California and our regional office in Washington, D.C.; however, opportunities are also available in other locations.

Responsibilities

Work in a team environment with customers, consultants, project managers, and release managers to provide programming support for custom, cutting-edge ArcGIS projects.

Assist in the design and implement standards of framework data models, metadata, content, accuracy, quality standards, data production systems, and portals.

As a member of project teams, assist in the management of contract deliverables through the application of planning, tracking, change control, quality control, and risk management techniques.

Work directly with clients on requirements definition and establishing a vision for using GIS within their company.

Collaborate with the ESRI marketing, sales, and business development teams to develop Professional Services opportunities.

Provide guidance and mentoring to junior team members.

Requirements

Bachelors or masters in computer science, engineering, mathematics, GIS, or a related field, depending on position level.

A minimum of three years of software development experience.

U.S. citizenship and ability and willingness to obtain a security clearance.

Competency with Oracle 9i/10g (Spatial), SQL Server, MySQL, and/or Microsoft Access.

Experience in data modeling, database development, and enterprise database architecture.

Demonstrated programming understanding of COM, C++, C#, VB.NET.

Ability to work on multiple projects simultaneously.

Strong written and verbal communication skills and good listening skills for individual interactions and in group settings.

Recommended Qualifications

Familiarity with GIS related technologies including ESRI software.

Experience developing with ArcObjects.

Experience with other industry-standard technologies such as XML, Web services, application servers, Web servers, and/or SQL performance tuning.

Experience with software estimating, planning, and progress tracking.

The Company:

Since 1969, ESRI has been giving customers around the world the power to think and plan geographically. We develop and support innovative tools for visualizing, analyzing, and managing

geographic data on the desktop, on a server, across the enterprise, in a mobile environment, and on the Web. With annual revenues of \$776 million and our software used in more than 300,000 organizations worldwide, ESRI is the market leader in geographic information system (GIS) technology.

ESRI is a socially conscious company, investing in education, conservation, sustainable development, and humanitarian affairs. We support organizations by providing technology, data, solutions, and interpersonal interaction.

Our diverse staff consists of 2,700 employees in the U.S., 800 of whom are in our 10 regional offices. We offer exceptional benefits, competitive salaries, 401(k) and profit sharing programs, tuition assistance, opportunities for personal and professional growth, and much more.
