**Mean Fire Return Interval
Pisgah National Forest
More Than Five Miles
From A Fire Station**

Mean Fire Return Interval  Fire Stations

-  0-5 Years
-  6-10 Years
-  11-15 Years

"The Mean Fire Return Interval (MFRI) layer quantifies the average period between fires under the presumed historical fire regime. MFRI is intended to describe one component of historical fire regime characteristics in the context of the broader historical time period represented by the LANDFIRE (LF) Biophysical Settings (BPS) layer and BPS Model documentation."
