In the U.S., Top Reason for Vaccine Hesitancy: ‘Concerned About Side Effects’
...but bad habits are worth the risk?

Vaccine Hesitancy
adults who describe themselves as 'probably not' OR 'definitely not'
going to get a COVID-19 vaccine once one is available to them

 Counties are color-coded with above-average rates of smoking and excessive drinking.
Counties with an above-average level of vaccine hesitancy are highlighted, while the other counties are blurred.

Adult Smoking & Vaccine Hesitancy
66% of counties with above-average vaccine hesitancy, have an above-average rate of adult smoking

Excessive Drinking & Vaccine Hesitancy
28% of counties with above-average vaccine hesitancy, have an above-average rate of excessive drinking
