

THE WARS OF USA

To all the GISP community, here is the analysis of different wars USA fought over the centuries.

For the geographic analysis, I have taken the list of all USA war data including location, casualties over the centuries from different sources such as Wikipedia, ESRI Online maps. I ran an analysis on top of the created data found a shocking casualty's rate which higher than population of state.

The above map symbology represents the number of wars inside a each hexagonbin created for 1000sqkm .

For Example < 14 , 14 represents that 14 wars or more than 14 fought in that hexagonbin location

Comparison of casualties by Century

- The number of casualties in world war II is higher than the population in **Michigan, North Carolina and Georgia.**
- The number of deaths in civil war is higher than the population in **Wyoming and Vermont.**

Clearly, we can see the 20th century wars reported more percentage of casualties than all those of other centuries. Imagining the worldwide casualties looks horrifying and more over the graph shows only the percentage of recorded casualties of USA and the non-reported numbers must be very high. In every war there are no winners just survivors and those survivors usually are mentally damaged and will never be the same.

- Density mapping is simply a way to show where points or lines features are concentrated in a given area.
- This density map shows the major war impacted area in the USA. It is based on the density calculation of War location feature.
- Theoretically, a smoothly curved surface is fitted over each point.

By above sense War should be avoided. Humans must be taught that war is not the solution to all our problems because it creates loss of confidence, trigger worse economic conditions. Some people claim that causes about religion may lead governments to involve in wars. By end of war there are a lot of deaths.

“If we are to teach real peace in this world and if we are to carry on a real war against war, we shall have to begin with the children”
